PROJECTS

Quant Trading App | [GitHub](#) | [Live Demo](#)

2026

Personal Project · React, TypeScript, Vite, Material UI, Python, FastAPI, SQLAlchemy, Supabase (PostgreSQL), Pandas, NumPy | Quantitative Finance / Full-Stack / Distributed Systems

- Engineered a parallel quantitative strategy engine that concurrently scans 134 NSE-listed stocks using a multi-threaded worker pool, computing SMA5/SMA20/RSI14/ATR14 signals and ranking candidates by a composite momentum score in under 2 seconds per pass.
- Built a JWT-authenticated, multi-tenant backend with FastAPI and SQLAlchemy, using bcrypt password hashing and Supabase PostgreSQL to give every user an isolated portfolio, position history, and trade log.
- Implemented automated risk controls, including drawdown-triggered stop-loss liquidation and one-click profit-booking that realizes gains across all profitable positions simultaneously.
- Developed a historical backtesting engine (6–12 month windows) reporting Sharpe ratio, max drawdown, and win rate against a simulated equity-curve benchmark.
- Designed a Spotify-inspired dark-mode dashboard in React, TypeScript, and Material UI with live P&L tracking, a real-time market ticker, and interactive analytics views; deployed to Vercel.

Stock Trading Simulation Game | [GitHub](#)

2026

Personal Project · React, TypeScript, Vite, Material UI, Python, FastAPI, yfinance | Full-Stack Development / FinTech

- Developed a realistic stock trading simulation game enabling users to paper trade Indian stocks (NSE) with real-time market data integration.
- Implemented virtual trading functionality allowing users to buy and sell stocks using simulated currency without financial risk.
- Designed and built a portfolio management system to track holdings, total portfolio value, and real-time Profit & Loss with interactive line and candlestick charts.
- Integrated backend APIs using FastAPI and yfinance for fetching live stock data and handling transactions efficiently.

SKILLS SUMMARY

Languages: Python, SQL, Java

Frameworks: Pandas, NumPy, Scikit-Learn, Matplotlib, FastAPI, SQLAlchemy, React, TypeScript

Tools: Power BI, Tableau, MySQL, SQLite, PostgreSQL (Supabase), Git, GitHub, MongoDB, Vite

Platforms: PyCharm, Jupyter Notebook, Visual Studio Code, Material UI, Antigravity, Claude Code

Soft Skills: Problem Solving, Analytical Thinking, Adaptability, Communication

Other: Prompt Engineering

CERTIFICATES

NPTEL – Natural Language Processing | [CERTIFICATE](#)

April 2026

- Completed NPTEL's NLP course covering text processing, language models, and sequence-to-sequence architectures.
- Gained hands-on experience with NLP pipelines, tokenization, and transformer-based models.

EDUCATION

SRM IST – Ghaziabad

2023 – 2027

B.Tech · Computer Science and Engineering

CGPA: 8.17/10 (till 6th Sem, 2026)

COURSEWORK

- Data Structures and Algorithms
- Operating Systems
- Object Oriented Design and Programming
- Software Engineering and Project Management
- Data Science
- Database Security and Privacy
- Database Management Systems
- Computer Organization and Architecture
- Artificial Intelligence
- Computer Networks
- Data Mining and Analytics
- Internet of Things

EXTRA CURRICULAR ACTIVITIES

Competitive Programming & Technical Exploration

- Explore quantitative trading strategies and financial markets beyond academic curriculum.
- Actively learn new technologies in Full Stack and Machine Learning through self-driven projects.

Strategic Gaming & Esports

- Engage in competitive multiplayer and strategy-based games requiring analytical thinking and decision-making.
- Develop quick problem-solving, adaptability, and risk assessment skills through high-pressure gameplay scenarios.
